<!-- The dns-prefetch link relation type is used to indicate an  
origin that will be used to fetch required resources,  
and that the user agent should resolve as early as possible.-->
```

```
<link rel="dns-prefetch" href="https://node-hnapi.herokuapp.com">
```

```
</head>
```

Use of rel=dns-prefetch suggests a browser should resolve the DNS of a specific domain prior to it being explicitly called.
